

Information Security Consulting

At Pexus LLC, we take information security seriously. We have deep expertise in all popular JEE, .NET and web application frameworks. We leverage that expertise in assessing security vulnerabilities using application penetration tools, threat modeling, and manual exploits to ensure your application is secure and provides highest data confidentiality, integrity and availability.

Security Testing Approach

Information Security Consulting

Our consultants are CISSP certified Information Security experts with number of years of experience.

We can help your organization assess and secure your enterprise applications through application security vulnerability assessments that are conducted using application architecture, design reviews, application penetration testing and application threat modeling. We can assist your development staff in implementing a Secure SDLC process to build more secure applications.

Think Pexus LLC when you need expertise in:

- **Application Security**
- **Network Security**
- **Cloud Security**
- **Vulnerability Assessment**
- **Secure SDLC**

We screen our consultants so that you don't have to. Our founder's strong IT Experience enable us to go the extra step in vetting our consultants technically to ensure it meets or exceeds our client's expectations. We work with our clients on a continual basis to solicit feedback to ensure you are getting the best resources for your projects.
